## Data Flow Diagram

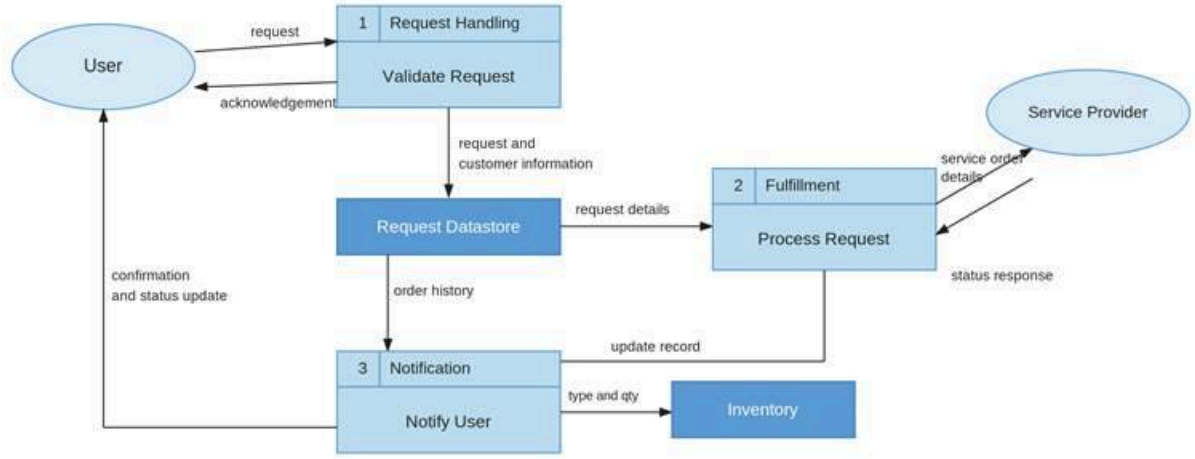

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

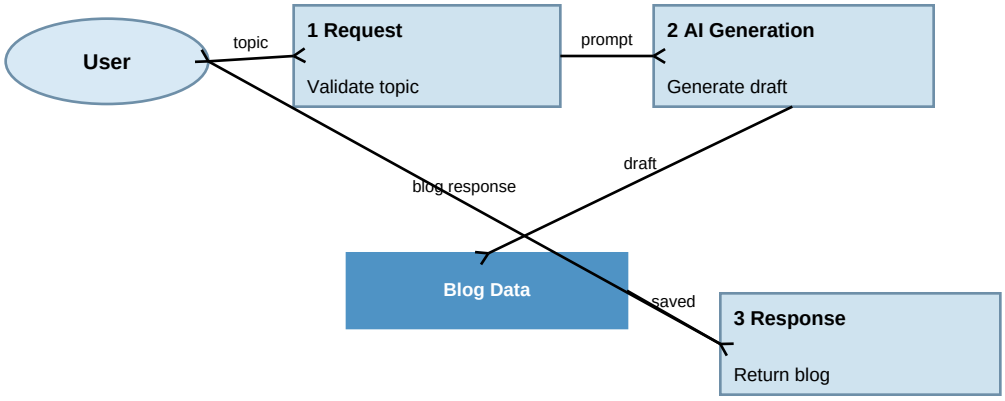

| Symbol | Name | Description |
|---|---|---|
| **Oval / Rounded shape** | **External Entity** | A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway). |
| **Rectangle with numbered header** | **Process** | An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order). |
| **Rectangle (solid fill, no number)** | **Data Store** | A place where data is held for later use (e.g., Customer Database, Inventory). |
| **Labeled arrow** | **Data Flow** | The movement of data between entities, processes, and data stores, labeled with what data is being passed. |

### Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

**AI Blog Nest API – Project Data Flow**

Flow: User → API request → validation → AI generation → storage → generated blog response.
