Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman / k6
Type of Testing	Load testing
Target Module / API	POST /generate-blog
Test Environment	Local development server
Test Date	30 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	1	10	60	Successful JSON response
2	2	50	120	Stable responses under load
3	3	100	120	No critical errors
4	4	200	60	Observe peak-load behavior

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	Record from test	Pending	Measure in test run
2	Response Time (Max)	< 5 seconds	Record from test	Pending	Measure in test run
3	Throughput (Req/sec)	Target based on test	Record from test	Pending	Measure in test run
4	Error Rate	< 1%	Record from test	Pending	Measure in test run
5	CPU Utilization	< 80%	Record from test	Pending	Measure in test run
6	Memory Utilization	< 80%	Record from test	Pending	Measure in test run

Step 4: Observations & Analysis

Observations: performance values should be recorded from the actual test tool run. No measured results were provided with the template, so actual values remain pending.

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[Insert Screenshot 2 here]
