Solution Requirements

Date	05 October 2026
Team ID	SWTID-2026-1369
Project Name	AI Blog Nest API TL: Priyadharshini S Members: Monica L | Durga K | Mothieswari R
Maximum Marks	

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Secure login with email/password or approved OAuth.	High
2	Authorization levels	Roles: User creates/edits blogs; Admin manages users and settings.	High
3	External interfaces	Connect to AI model API and authentication service.	High

		services the system must Connect securely to AI generation and content services.	High
4	Transactions processing	Process request data, call AI service, and return generated blog.	High
5	Reporting	Provide generation history, usage summary, and export-ready content.	Medium
6	Business rules, etc.	Apply content validation, length limits, rate limits, and workflow rules.	High
7	Compliance to laws or regulations	Protect user data and follow applicable privacy and AI-service terms.	High
8	*Other*	Allow editing, regeneration, save, and download of generated blogs.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	Fast API response and generation status updates.	Target API response < 2 seconds excluding model generation.
2	Scalability	Support growth in users, requests, and stored blogs.	Horizontal scaling with queued AI requests.
3	Security & Data Privacy	Protect prompts, accounts, and stored blog data.	HTTPS, access control, validation, secure secrets.
4	Reliability & Availability	Keep service available and recover from failures.	Target 99.9% monthly availability with retry handling.
5	Usability & Accessibility	Simple interface with readable controls and keyboard access.	Clear navigation and accessible forms.
6	*Other*	Maintainable and portable architecture.	Documented API, modular services, environment-based config.
